Platform Oneoff Tasks

List of Oneoff Tasks

PEND Organize Script repo

Organize `scripts` in `/scipts` and `scripts` in `$PATH`

- ☐ Organize `/scripts`
- ☐ Oragnize qtile scripts
- ☐ Oragnize `$PATH`

DONE Github repo updates track

- **OBJECTIVE:** Find a way to keep track github repo updates and get notification from updates

  ---

- **[NOTE]** taken on [2025-09-06 20:08]:
  Keep track of `repo` updates and receive notifications throught emails by subscribing to the target `repo` and enable `email` notifications

  ---

ABRT Github wiki

- **OBJECTIVE:** learn to write a github wiki page

- **[NOTE]** taken on [2025-09-06 20:09]:
  Wiki is not needed for a `pkm` system as wiki is the way to take notes within a functional repo. That is essentially a `pkm` repo

  ---

PEND Update github profile

- **OBJECTIVE:** *Update my github profile*

ABRT Workaround id link

- **OBJECTIVE:** Workaround github render does not support for id link like in orgmode

  ───────────────

- **[NOTE]** taken on [2025-09-06 21:03]:
  There are hardly and workaround with `id-link` that actually work because github is not meant to be a `pkm` hosting site. However one can always manually add file-link to their documents

  ───────────────

- **Reference:** Workaround id link on github orgmode @Reddit

PRTL Using file_link on Github

- **OBJECTIVE:** Adding aditional file_link in orgmode for interation on Github

  ───────────────

- **[NOTE]** taken on [2025-09-05 23:42]:
  + **Idea:** Using snippets to poplate an extra link for rendering on github
    - E.g. Using file_link on Github @Org (view on Github)
    - **Issue:** To generate a `file_link` to a percise location requires s *slug format* of a `headline` AND its `state` which is not a suitable solution as `state` change dynamically compares to a static nature of a `headline`
      * Workaround - Disable render of `state` on github combines with `headline-slug` to genrate html friendly link
      * This works very fine with `docs` but not `tasks`

  ───────────────

PEND Advanced search Github

- **OBJECTIVE:** Learn avanced search technique on github
- **Reference:** Github advanced search tips @Freecodecamp

DONE Create issue on nvim-orgmode (vim-regex)

- **OBJECTIVE:** Create an issue on latex syntax does not load on nvim first launch
- **Visit:** Issue nvim-orgmode @Github

DONE Setup rclone mega

- **OBJECTIVE:** Setup rclone to sync with mega-nz cloud platfoem
- **Reference:** Mega-rclone guide @Mega-doc

DONE Orgmode github footnote

- **OBJECTIVE:** Reference materials in `footnote` with `orgmode` on `github`

  _____

- **[NOTE]** taken on <2025-07-29 21:13>:
    - Orgmode footnote is not support by default on `org-ruby`
    - To enable this feature add:
      `#+OPTIONS: f:t`
        * Example: Org-ruby footnote @Github
            · Footnote with $f(x) = a^2 + bx = c$

  _____

- **Reference:**
    - Footnote reference example @Github
    - Github orgmode footnote not properly supported @Github-issue
    - Org-ruby add footnote support @Github-issue

DONE Orgmode inline language

- **OBJECTIVE:** Write inline source code block

  _____

- **[NOTE]** taken on <2025-07-29 22:22>:
    - This is a an inline language block `require("orgmode").setup()`
    - Github does not seem to support inline language code block

  _____

- **Reference:** Inline source code block @Github-issue

PEND Initialize github.io

- **OBJECTIVE:** Create a functional github.io page for hosting my `PKM`
- **Reference:** Create your website @Github-doc

DONE Testing image render

- **OBJECTIVE:** Find an image syntax that works on both github and orgzly

  _____

- **[NOTE]** taken on [2025-09-06 20:17]:
  Syntax that works with *github* and *orgzly* is [[/root/to/file]l] syntax
  (root as in the root directory of current repo). To obtain this relative directory
  (relative directory = `/root/to/file`). Using repo `root-dir` as absolute path
    - To obtain current file root dir run:
      `git rev-parse --show-toplevel`

- Exclude root dir from filepath with `vim.gsub` to obtain a relative dir to target `asset`

ABRT Github org-parse Images

- **OBJECTIVE:** Testing if `org-ruby` parser on github render images with `attributes`

- **[NOTE]** taken on [2025-10-14 05:04]:
  This is a test note for image `attribute`:
  - `wallyqs/org-ruby` does not support `#+ATTR_HTML` attribute

- **Reference:** Orgmode ref card @Org

PEND Manage Dotfiles with Gitbare

- **OBJECTIVE:** Mange files using a gitbare repo
- **Reference:** Git Bare Repository @Youtube-DT

DONE Find a Suitable Search Engine

- **OBJECTIVE:** Find a more suitable search engine than `google`

DONE Config SearXNG

- **OBJECTIVE:** Learn `syntax` and config `searxng`

TODO Change Keyword Palette

- **OBJECTIVE:** Update color palette for orgmode keywords
